Network Monitoring and Management Services

Respondents should explain how the proposed network would be monitored and managed. At a minimum, please define and elaborate on how the proposed network solution addresses the five ISO network management functions summarized below.

Performance Management – Measures and makes available various aspects of network performance so that inter-network performance can be maintained at an acceptable level. Examples of performance variables that might be provided include, but are not limited to network throughput, user response times, and component utilization.

Configuration Management – Monitor network and solution configuration information so that the effect of configuration changes (intentional or non-intentional) can be tracked and managed.

Accounting Management – Measure network-utilization parameters so that individual or group users on the network can be regulated appropriately. Such regulation should minimize network problems and maximize the fairness of network access across all domains and users.

Fault Management – Detect, log, notify support organizations and users (where appropriate) of, and (to the extent possible) automatically fix network problems to keep the network running effectively. This should include proactive determination of symptoms, isolation of problems and rapid resolution.

Security Management – Control access to network and solution resources according to defined policies so that the network cannot be sabotaged (intentionally or unintentionally) and those without appropriate authorization cannot access sensitive information.

Please note that the successful vendor will be expected to provide statistical /traffic reports or equivalent graphs/logs (daily, weekly, monthly and yearly statistics) for each of the points of

connection to the network.

Provide sample responses. Also, discuss if and how your solution complies with industry standards.

All relevant information will need to be securely retained for a period specified by the municipality for audit and analysis purposes.

Respond in the text box below.

Please expand this column if required.

Customer Service and Technical Support Services

Respondents should explain their approach to the provision of customer service and technical support via a call center or other mechanism.

This should be capable of handling:

Billing, invoice, and/or settlement charges between the municipality and the service provider, if used (customer service issues).

Technical problems reported by users (technical support issues).

Other aspects of the customer service mechanism that the vendor will be expected to provide are:

The ability to also report an issue and obtain a resolution via e-mail, web-based interface, and instant messaging (IM).

The availability of a dedicated technical expert, with knowledge of and capability to resolve all technical aspects of the network, should be available on a telephone or cellphone basis, 24x7x365.

Proactive notification network problems, outages and other issues affecting the solution via e-mail and web interface are expected.

The development, maintenance and hosting of a library containing electronically available frequently asked questions ('FAQs') to aid in self-support will be an advantage.

A secure, managed database of all call tracking detail, resolutions, etc. This should be fault-tolerant and backed up on a regular schedule and should allow secure login from private residences by municipality officials.

The creation and delivery of pre-defined and event-related ad-hoc reports on access issues, wait times, abandoned calls, resolution times and other standard customer service and technical support metrics.

Respond in the text box below.

CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.

- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.

3. Municipal Supply Regulation 38(1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.

4. This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

5. In order to give effect to the above, the attached Certificate of Bid Determination (MBD9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
