# GARDEN ROUTE DISTRICT MUNICIPALITY TERMS OF REFERENCE

# IMPLEMENTATION OF AN AUTONOMOUS EMAIL SOLUTION TO MITIGATE CYBER THREATS

# TERMS OF REFERENCE

# INTRODUCTION

The project entails the implementation of an autonomous Email solution to mitigate cyber threats which have become more complex, sophisticated, and rapid in the current technological climate. Current legacy approaches have become insufficient, it has become a priority to keep threats outside the network and protect personal information. The Garden Route District Municipality with efficiency in mind, is continually automating business processes and has thus become more reliant on technology to deliver basic services.

# BACKGROUND AND SCOPE

With the evolving threat landscape comes the need for extra defense against sophisticated cyber criminals who exploit large and important networks. This is a more pressing concern for governmental organizations that host important data systems which are likely targets for malicious attacks.

The Garden Route District Municipality is a reputable and well-known organization that has a profile of interest to a range of potential attackers. The Garden Route District Municipality requires complete network visibility to thoroughly survey its network. Additionally, the organization would need a security solution capable of detecting and responding to potential vulnerabilities and actual threats, inside and outside the network that may aim to target its critical assets, including sensitive information.

Service providers who can render a complete cyber defense solution and associated services are hereby invited to submit their tenders for the implementation and management of an autonomous email security solution in terms of email protection on a rental basis. The Garden Route District Municipality wishes to enter into a contractual agreement with a single service provider from the date of final award, for a period not exceeding three (3) financial years. The purpose of this tender is to mitigate the risk of potential cyber threats but also to prevent data loss and system downtime through email communications which could potentially impact negatively on service delivery.

The Garden Route District Municipality wishes to procure an affordable, cost-effective email security solution to secure and ensure information is protected across the digital landscape on a reliable platform.

The Garden Route District Municipality's network currently consists of 450 Microsoft365 mailboxes.

The Garden Route District Municipality through this request for tender places a shared responsibility on the successful bidder to assist the Garden Route District Municipality with legislative compliance to applicable laws around data protection.

# 1. TECHNICAL REQUIREMENTS

The technical requirements are focused on two (2) separate aspects listed in the tables below with reference to:

- a) Email security.
- b) General.

	1. EMAIL SECUR	ITY	
No.	Requirement Description	Comply Yes/No	Bidder's compliance statement and reference (bidder to provide a page number and clause corresponding to this requirement, in his bid submission)
1.1	The solution must be an API-based email security platform capable of continuously learning, detecting, and remediating advanced threats at the mailbox level, before and after email delivery.		
1.2	The solution must be based on probabilistic mathematical methods, analyzing, and correlating 100's of distinct dimensions.		
1.3	Behavioral Learning Within Email Layer: The proposed Solution must have this in-built functionality accessible via the integrated Platform single login.		
1.4	The solution must also have the inherent ability to provide an autonomous response module that acts against email-borne attack campaigns. It must then be hosted on a dedicated instance that integrates with the existing behavioral based network monitoring tool installed onsite to provide insight and control over email activity. This insight must establish the correlation of the network to the email platforms.		

1.5	The solution must passively operate to extract metrics and meta data from the email traffic & platform - to develop a 'normal concept' for email activity. This email solution must use absolutely no rules, signatures, or historical data to detect & neutralize threats, and must be purely based on machine learning and systemic mathematics. By correlating data across email and network traffic,	
	this must allow the solution to evaluate the level of	
	threat posed by an email and to spot unusual, anomalous emails that have bypassed any existing email gateway tools.	
1.6	All data ingested by the mail capability must be completely encrypted in transit and at rest within	
	the solution's own form of cloud service or	
	requested service of the current deployed	
	platforms.	
1.7	All data retention polices must be able to be	
	fully controlled by the necessary client and can be configured via the systems own built in	
	platforms.	
1.8	Possible future network monitoring part of the solution will need to communicate with the email protection platform to provide it with sufficient information to detect and respond to anomalous email activity. Communications between the two will need to supply information to the network to enable it to respond to email borne threats and to provide additional contextual information to users in the overall User Interface.	

No.	Requirement Description	Comply Yes/No	Bidder's compliance statement and reference (bidder to provide a page number and clause corresponding to this requirement, in his bid submission)
1.9	<ul> <li>The future telemetry data that is exchanged between the network part of the solution and the email platform must be limited to the following:</li> <li>a) Probabilistic data structures which describe the pattern of activity, the solutions rarity and frequency scores of visited hosts, domains, file hashes and links seen in the platforms monitored environment. These data structures do not include any of these details in an extractable format.</li> <li>b) Hostname, IP, MAC address, Operating system, Device label and time of last seen are transferred.</li> <li>c) Solution Alert information. Notifications of Alerts occurring because of anomalous network activity may be transferred to the email platform instance and/or select email data may be transferred to the network for the purposes of security forensics.</li> <li>d) Email addresses, naming, and groups found in emails and any associated email repositories.</li> </ul>	,	
1.10	<ul> <li>Access to Email Platform by the vendor must be limited to the following purposes only:</li> <li>a) Initial set up, configuration and traffic validation</li> <li>b) Access for the creation of customer reports</li> <li>c) Security incidents</li> </ul>		
1.11	All email data access must be logged and controlled. Logs of all data access must be available through the audit page in the interface, an essential capability needed in the UI. The body content of original emails received must not be available to the manufacturer personnel through the interface and emails must be individually encrypted.		
1.12	Advanced Malware & URL Protection, Mailbox-Level BEC Protection (including CEO and Employee Impersonations Spear Phishing and Credential Theft, Supply Chain Attacks.		
Integi	ation	I	
1.13	Solution must provide integration with both cloud (Azure) and on- premises Active Directory for recipients address validation.

# CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids<sup>1</sup> invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).<sup>2</sup> Collusive bidding is a pe se prohibition meaning that it cannot be justified under any grounds.
- 3. Municipal Supply Regulation 38(1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
  - a. take all reasonable steps to prevent such abuse;
  - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
  - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4. This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5. In order to give effect to the above, the attached Certificate of Bid Determination (MBD9) must be completed and submitted with the bid:

<sup>1</sup> Includes price quotations, advertised competitive bids, limited bids and proposals.

<sup>2</sup> Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
